

DOB: 2017-01-03 **Age:** Unknown **Study Time:** 10:00 AM
Species: Canine **Gender:** MN **Reading Group:** Studycast Reading Group
Breed: Border Collie **Referring Group:** Anytown Family Practice
Height: 24 in **Weight:** 30 lbs
BSA: 0.54 m²
BMI: 36.62

Study Quality: Excellent

After informed consent, a complete Abdominal ultrasound was performed.

Liver CBD Diameter: 4.0 cm Gallbladder Size: 2.2 X 4.2 X 3.1 cm Wall Thickness: 0.9 cm Pancreas Size: 6.8 cm Pancreatic duct: 0.7 cm Right Limb: 7.2 cm Body: 6.1 cm Left Limb: 4.8 cm	Spleen Size: 10.0 X 5.0 cm Kidneys Left: 4.7 cm Left Adrenal Gland: 1.4 X 0.5 X 0.4 cm Right Adrenal Gland: 1.4 X 0.6 X 0.7 cm Aorta Max AoD: 3.2 cm AoD Cranial: 3.0 cm AoD Mid: 2.7 cm AoD Caudal: 3.2 cm	GI/Mesentery Intestinal Wall Thickness: 0.2 cm Gastric Wall Thickness: 0.3 cm
---	--	--

- Heterogeneous hyperechoic liver is well visualized. The liver is mildly enlarged. The common bile duct measures 4 cm in diameter. A complex mass measuring 0.71 (length) x 0.62 (transverse) cm is seen in the right lobe.
- Normal gallbladder. The gallbladder measures 2.2 (length) x 4.2 (transverse) x 3.1 (VD) cm and is well visualized. Gallbladder wall is 0.9 cm thick.
- Homogeneous pancreas is well visualized and measures 6.8 cm. The pancreatic duct measures 0.7 cm. Pancreas right limb measures 7.2 (transverse) cm. Pancreas body measures 6.1 (transverse) cm. Pancreas left limb measures 4.8 (transverse) cm.
- No masses seen. No lymph nodes seen.
- Spleen, measuring 10 (length) x 5 (transverse) cm, is well visualized and appears within normal limits in size and echogenicity.
No fluid collection in spleen.
- Left kidney measuring 4.69 cm.
1.37 (length) x 0.49 (transverse caudal) x 0.40 (transverse cranial) cm left adrenal gland.
There is no evidence of hydronephrosis, mass, cyst, stone or perinephric fluid collection on the left kidney.
1.41 (length) x 0.61 (transverse caudal) x 0.66 (transverse cranial) cm right adrenal gland.
There is no evidence of hydronephrosis, mass, cyst, stone or perinephric fluid collection on the right kidney.
- No definite abnormality of the aorta, caudal vena cava, or common iliac arteries is seen.
The maximum aortic diameter is 3.2 cm (caudal).
No lymph nodes seen.
- The bladder is well visualized. Both urinary jets are visualized. No sediment present.
- No evidence of ascites is seen.

Conclusions:

Liver mass seen.
 Dilated pancreatic duct. Hyperechoic liver. Mildly enlarged liver. Enlarged right adrenal gland. Enlarged left adrenal gland.
